# Powerhouse of the rooster's body

By RB Sugbo GT

One key to winning cock-fights lies in this organ. What is this organ that is the real powerhouse of the rooster's physical capability?

Well, If we want our game cock to perform at his best come fight day we should stimulate and protect his liver. Why? Because, the liver is a central laboratory of a chicken's body. It is essential that this organ is kept in an excellent condition.

The liver performs many complex functions to maintain homeostasis (harmony among all the systems of body). When the liver is affected due to any reason, efficiency of the liver comes down in detoxification and metabolic processes. This, in turn, affects the overall performance of the bird.

We know that the liver is one of the busiest organs in the body. Liver acts as a clearing house for substances that enter the body. It carries out a large number of important digestive, metabolic and excretory activities, all of which have a significant role not only on the rooster's health but also on its fighting capabilities.

Liver is a vital organ involved in metabolism, storage, secretion, detoxification and protection. Being the central organ of metabolism, liver is always subjected to damages of various kinds. Liver stimulants and protectants are usually supplemented to support liver in detoxification and to improve the structural and functional integrity of the liver

Fortunately, there are liver tonics containing extract of herbal ingredients that effectively improve liver functions thus ensuring better feed utilization, energy production and gamecock's overall fighting performance..

A good liver tonic guards the liver against various toxins, chemical drugs and toxic effect of the feed contaminants and other conditions that put the liver directly or indirectly at risk. It helps in rapid regeneration of liver tissues and cells. It stimulates sluggish liver cells and restores liver functions. It improves feed metabolism and utilization.

## MANA and Suregain Club

---

**M**asang Nagmamanok (MANA) Inc. manages Suregain Club

Masang Nagmamanok (MANA) Inc., a non-stock corporation, is an advocacy for the promotion of the welfare and interest of the common sabungero and chicken raisers and the preservation of sabong as a means of livelihood, sport and part of Pilipino culture.

MANA operates [Suregain Club](#) for the benefit of members. Among the services are a school and library; discount store; and monthly raffles of breeding materials as part of MANA's Game Fowl Dispersal Program.

**Itaguyod ang kapakanan ng masang sabungero**

Itaguyod natin ang kapakanan ng kapwa masang nagmamanok. At ipaglaban ang sabong. Ito ang simulain ng Masang Nagmamanok (Mana). Gawin po natin ito. Dahil alam natin na ang karaniwang sabungero ang tunay na gulugod ng industriya ng sabong.

Visit Suregain Club and [be a member](#). You will enjoy privileges such as discounts, free E-books and publications, lessons and cocking knowledge, and even win prizes in the monthly raffles free to members.

In addition to all these, you are helping the cause of Masang Nagamamanok (MANA) in promoting the interest of the commong sabungeros and chicken raisers.

---

**FREE RAFFLE FOR MEMBERS ONLY.**

[Click here](#)

As our way of saying thank you to the members of MANA's Gamevitz Suregain Club, we will have monthly draws to give members opportunity to win prizes. If you are a member of Gamevitz Suregain you are automatically entered in the draw. [Be a member now!!!](#)

Only members by the time of the draw are qualified to avail and win. Prizes will be trios and breeding materials as these free raffles are part of MANA's gamefowl dispersal program.

## How much should a Peruvian game fowl cost?

**T**his is a frequently asked question from readers who are following my blogs. How much is a Peruvian game fowl? I have repeatedly answered this question in somewhat various manners. My answer always depended on how the particular question was premised. Why?

Because, there are good Peruvians, there are bum, there are Peruvians good for the torneos, there are good only for the mesa. There are good breeders in Peru, very good indeed, who are not known to us or to the world. There are also known breeders, very well-known, who are not good.

To be frank, there is no standard Peruvian Game fowl. Go to Peru, visit the different breeders and you will see how different looking are their roosters from one breeder to another. Check the photos on the net, and you will even see some so-called breeders of authentic Peruvian Game fowl, with birds from within his own flock that look far different from one another. American game fowl also vary in looks but the variations are not as pronounced as in the Peruvian game fowl.

Thus, there are no experts on the Peruvian. Each of these self-proclaimed experts are limited to his own knowledge based on information from own sources. Although, there are experts on their own Peruvian, there are no experts on the Peruvian in general. The good breeders in Peru have certainly set their own strains, or possibly even breeds. But whatever they have created are their own and different from the other strains or breed created by other good breeders. The generic term for all these strains is "Peruvian." However, not all Peruvians are the same.

The point is that the so-called Peruvian game fowl are different animals. Thus, the answer to the question of how much should

a Peruvian cost, it depends. It depends on the particular Peruvian fowl and it depends on your purpose. For example, like the American game fowl, the cost of the Peruvian varies from one breeder to another. It may also vary from one particular Peruvian chicken to another. (Rey Bajenting)

***For [Suregain Club members](#): To continuously learn more about the Peruvian such as suggestions on how to breed Peruvian grades or why Vic Lacsao won the Bakbakan with Peruvian graded stags, just ask for your free copy of "Notes on the Peruvian." Notes on the Peruvian is updated as soon as new and more current information come our way. Members may request free copy through > [contact us](#); then state on the message: Notes on the Peruvian; your name; and your MIN. Non-members, be a [member now!](#)***

## Katanungan: Ano ang dapat gawin sa manok na naglulugon?

**Taglugon na Ano daw ang dapat gawin sa manok na naglulugon. Ito ang katanungan na malimit nating natatanggap ngayon. Oo dahil panahon na ngayon ng taglugon.**

Sa ganitong panahon ng taglugon wag po nating pabayaan ang ating mga tinali na naglulugon. Kahit na ba hindi pa natin ito mailaban, kailangan paring bigyan ng masustansyang pakain. Ang totoo mas nangangailangan ng sustansya ang manok na naglulugon dahil ang tumutubong balahibo ay nangangailangan ng sustansya.

Tandaan po atin natin na ang manok na naglulugon ay nasa stressful na sitwasyon. Wala sa maayos na kundisyon ang pangangatawan. Kaya hindi na ito dapat ilaban. Ngunit hindi ibig sabihin na dahil hindi na ito ilalaban ay hahayaan na lang ito sa isang sulok at pababayaan na lang. Kailangan parin ng pagaaruga ang manok na naglulugon. Huwag lang natin palaging hawakhawakan at himashamisin. Masakit ang paglugon lalo na't sa panahon na tumutubo ng ang bagong balahibo. Hayaan natin sa cord ang manok. Sa may

lilim at damuhan.

Kailangan din ng sustansya ang manok sa panahong ito. Ang balahibo ay binubuo ng mga protena kaya sa panahon na tumutubo ang balahibo ay mas nangangailangan ang manok ng pakain na may taglay na mataas na antas ng protena. Maaring conditioning pellets parin ang gamitin natin o kaya ang ating nakasanayang maintenance ration ay dagdagan natin ng kunting protein expander pellets. Halimbawa walong kilo ng ating maintenance feed hulan natin ng dalawang kilo ng protein expander pellet.

Sa atin sa [RB Sugbo](#) ang maintenance feed natin ay 70% pigeon pellets special o kayay maintenance pellets na may 18% crude protein contents at 30% ordinary

*Ang manok na naglulugon ay wala sa kundisyon.*

concentrate. Ang halong ito ay may halos 17% CP. Sa panahon na tumutubo na ang balahibo ng manok ay dinadagdagan natin ang CP sa ting pakain pamamagitan ng pagdagdag ng protein expander. Kahit 10 o 20% lang ang protein expander sa ating halo ay sapat na. Ang bitamina naman na dapat ibigay sa panahong ito ay yong ihahalo lang sa tubig. Wag yong sinusubo pa o iturok dahil hindi nga maigeng hawakhawakan natin ang naglulugon.

May mga nagtatanong paano daw na mas bumilis ang paglugon. Ganito po ang gawin natin: sa unang yugto ng paglulugon, sa paglaglagan ng balahibo, ibaba natin ang CP sa ating pakain. Damihan ang grains at kuntian ang pellets sa pakain. Sa panahon naman na maugumpisa nang tumubo ang bagong balahibo, taasan natin ang protena sa pakain. Ngayon na natin hulan ng protein expander pellets ang pakain.

## 7 nabbed in cockfighting shootout in Vietnam

**About 100 police officers were mobilized to suppress and arrest seven armed cock fighters who opened fire on their competitors over a conflict in the south-central province of Binh Thuan on Thursday.**

One of these cock fighters, Nguyen Van Toan, 35, used four guns to shoot back at police officers who tried to arrest him, said Colonel Nguyen Van Minh, deputy director of the provincial police department.

The seven cock fighters, aged from 22 to 36, hailing from the southern province of Binh Duong, arrived in Binh Thuan's Ham Tan District on Thursday afternoon to stage a cockfighting session for money with some local residents.

During the game, a conflict happened between the two groups and one member of the group from Binh Duong pulled out a gun and opened fire on members of the local group.

Locals reported the incident to the police, who deployed a large number of officers to the scene to prevent the shooting.

When police came, five of the seven got into a car and ran away while two others

got on a bus to escape. More police officers were mobilized to the commune, totaling about 100 members, Colonel Minh said.

Local police arranged a force to pursue the car and stopped it later. They detained the five and found them not having any gun. Meanwhile, another police team chased after the bus

and stopped it in Tan Duc commune. The two cock fighters jumped off the bus and ran away in different directions but police could easily arrest one of them while the other pulled out a gun and shot back.

The armed man then rushed into a local house and fired back. Policemen had to throw tear grenade into the house.

The man then left that house for another one, continuing to shoot towards police officers who surrounded

the area.

After about an hour of fire exchanges, a group of police officers managed to get close and seized him without any casualties reported, Colonel Minh said.

The police are hunting down another member of the gang.

**HSUS shouts:**

**We always said cockfighting was tied in with crimes. The arrest of 7 after a massive shootout at a cockfight in Vietnam proves the point.**

**—HSUS**

But what about this?

["Cops" TV crew member dies after Neb. restaurant shootout](#)

Our point is violence could happen anywhere not only in cockpits. Will HSUS say restaurants are tied in with crimes too?

# Old Kentucky cockers club raided

**BY BILL ESTEP**

bstep@herald-leader.com  
May 6, 2014

Three Floyd County residents helped operate one of the largest, most lucrative cockfighting rings in the country, a federal investigator alleged in a sworn statement. Federal authorities charged Walter Dale Stumbo, 51; his wife Sonya Stumbo, 51; and his son Joshua Stumbo, 25, with conspiring to operate an illegal gambling enterprise and with illegally conducting cockfights, according to documents in federal court.

The three allegedly helped run a cockfighting pit at McDowell called the Big Blue Sportsmen's Club, which featured arena-style seating, a full-service restaurant and laminated membership cards.

A federal investigator said that at various times during a yearlong undercover investigation, police saw vehicles at Big Blue from states throughout the Southeast and as far away as Illinois, Michigan and Maryland. Hundreds of people, including children, attended fights that left bloodied birds dead

or dying, Stan Wojtkonski, an investigator for the U.S. Department of Agriculture, said in an affidavit.

Sonya Stumbo told one undercover officer the club had memberships on file for more than 6,000 people. The club — which had photos of known police informants posted — scheduled cockfighting on more than 30 days in the 2013-14 season, including a Kentucky state championship and a "World Cup," Wojtkonski said.

The club allegedly charged bird owners fees of hundreds or thousands of dollars to enter contests. Based on the schedule, Wojtkonski estimated the business took in more than \$1 million annually. Untold thousands more changed hands in betting, according to the affidavit.

## 'It's no secret'

Pillersdorf said the existence of the cockfighting arena — formerly the site of a local squirrel festival — was widely known and "openly tolerated." It's no secret that it's been there for 25 years," Pillersdorf said.

## Cockfighting in the United States

As of 2007, cockfighting is now illegal in all 50 states, as well as the District of Columbia. However, punishments for violating these laws vary: only 33 states (as well as Washington, D.C.) have made cockfighting a felony offense.

It is also illegal in all states to knowingly attend a cockfight, or to bring a minor to such an event. This was made a federal offense earlier this year by the Animal Fighting Spectator Prohibition Act, part of the Farm Bill signed into law in February.

Cockfighting is still legal in several U.S. territories, including Puerto Rico, Guam and the U.S. Virgin Islands.

Walter, Sonya and Joshua Stumbo plan to plead not guilty. Their defense will be that they had nothing to do with gambling, Pillersdorf said.

Wesley Dean Robinson, 57, and his son, Joshua Robinson, 33, of Wise County, Va., also were charged in the alleged conspiracy.

Cockfighting is a felony in Virginia, so many residents who wanted to fight their birds traveled to Kentucky, where cockfighting is a misdemeanor, Wojtkonski said.

## Breeding Ideas: How to breed killers

**T**he game fowl is not bred for meat, for egg, or for beauty alone. The purpose for which the game fowl is bred is very complicated to achieve. Genetics, by itself, is a complicated science. It is the study of how genes are passed on from one generation to the next. In the case of breeding the game fowl it is the more complicated because of the purpose for which the game fowl is bred.

The game fowl is bred to fight, and fighting ability is far from simple hereditary trait. The color of plumage and legs and the type of comb are simple hereditary traits but fighting qualities are not simple as these are dictated by several pairs of genes in several different locations. This is the hard part. It is much simpler to breed broiler and hog mainly for meat consumption wherein size and meat quality are the only considerations. Or layers for that matter.

This is where perfo-genetics comes in. RB Sugbo Game-

fowl Technology coined the word perfo-genetics meaning to breed the game fowl based mainly on fighting performance without so much regard for purity of the bloodline. The main concern of perfo-genetics is the purification of fighting traits, not the bloodline. Perfo-genetics is simple genetics of performance.

In effect, RB Sugbo's perfo-genetics is indeed Eugenics. Eugenics is the belief and practice of improving

the genetic quality of the human population. It is a social philosophy advocating the improvement of human genetic traits through the promotion of higher reproduction of people with desired traits (positive eugenics), and reduced reproduction of people with less-desired or undesired traits (negative eugenics). This is hard to do in humans because of moral, social and human rights concerns. It is simpler to apply on game-cocks.

We gamecock breeders should take advantage of this fact that in breeding the game fowl nothing will hinder us from breeding only individuals possessing desirable traits. The more desirable traits and the less undesirable traits in a gene pool, the greater the chances of producing desirable individuals.

## How to improve modern bloodlines by breeding in old traits

Some famous modern bloodlines are slipping away or deteriorating. The reason: too much concentration of traits for the slasher or LK fighting. Yes traits for the LK such as defensive maneuvers, keeping the opponent at safe distance, and flicking, jabbing blows tend to sacrifice equally important fighting traits as gameness, power and endurance. RB Sugbo bloodlines are no exception. That's why we acted before it's too late. We brought in imported bloodlines for the purpose. [Click here](#).
