Roosterman

Roosterman is your online magazine on the rooster game. It is published by Masang Nagmamanok (MANA) Inc., an advocacy promoting the welfare and interest of the common sabungeros.

MANA is based in Cebu, Philippines.

Baka nais nyong itaguyod ang kapakanan ng mga sabungero.

Bumisita at mag like sa community page natin sa MANA.

Just click MAMA logo below

Getting louder and louder

Roosterman, your online magazine on the rooster game is free. Free copies, free information.

Roosterman is read by thousands and thousands. The chain of information includes the thousands of friends and followers on Facebook who read or subscribe to Roosterman, there are also thousands of others in our email list who can read Roosterman. We also have a number of websites and blogs from which readers can access Roosterman.

Moreover, readers forward copies of Roosterman to contact and friends who then forward their copies to more contacts and friends. Sending copies of printed magazines costs hundreds if within PH, thousands if abroad. With Roosterman it's free.

Circulation of printed publications will take months. Roosterman's is instant. Printed publications have limited copies. Roosterman's is unlimited.

No question about it, Roosterman is read by thousands and thousands making the voice of the common sabungeros louder and louder. Roosterman is one of its kind. Let's hope there will be others like Roosterman

Team Barsur an inspiration to the small like many of us

Somewhere in this issue of Roosterman No. 40 you will find the story of Jimmy Camposano and Team Barsur. The story is a perfect example of a case of a small making big. Big, not in wealth, but in honor in the field dominated mostly by "big timers."

In cockfighting, you may succeed if you are good. But even if you are not, you may still survive if you are rich. Many breeders seem to excel, not because they are good but because they can afford their mediocrity.

Because they are rich they can buy the most expensive materials from the grandest farms. Chances these materials are good, because the original breeders from where the rich buy them are competent breeders.

Then the rich breeders can produce as many chickens they want. When you have many chickens chances are you may find some aces.

Then they can participate in as many derbies as they want, including the biggest ones. They can even participate in a derby with multiple entries. So probability will see to it that these rich breeders will win once in a while.

But you cannot enjoy these luxuries if you are not rich. If you do not have money to throw away, you better be good. So Team Barsur must be good. First Barsur's materials are not expensive, but very competitive. Coming from [RB Sugbo GT](#), these bloodlines are dubbed the poor man's champions. Then Team Barsur does not have thousand of chickens to select from, but the percentage of the better ones must be high. Finally, Team Barsur cannot afford to have multiple entries in the circuit, but as the team proved, one entry is enough.

Yet in the past breeders' season Team Barsur won both the Eastern Visayas Gamefowl Breeders Association (EVGBA) and the National Federation of Gamefowl Breeders (NFGB) Breeder of the Year awards. And Team Barsur did it on its rookie year. Thus, indeed a Cinderella Finish done twice. What inspiration to small breeders like most of us.

Barsur: The BOTY and the Best

With humble bloodlines for the common man, such as blakliz and Sugbo lemon, Team Barsur joined, fought and conquered the tough fields in both its region and the country.

The Municipality of Carigara, Leyte lies between the Cities of Tacloban and Ormoc if you take the Palo-Carigara-Ormoc road, the main route from Tacloban to Ormoc.

Carigara is said to be the first town established in Eastern Visayas.

It is also known for its handcrafted “Sundang” a native bolo knife that is mainly used for farming and livelihood. An essential tool to Filipino farmers.

It is also home of Barsur Gamefarm of brothers Jimmy and Renner Camposano. And, Barsur is the reigning Breeder of the Year of both the regional Eastern Visayas Gamefowl Breeders Association (EVGBA) and of the National Federation of Gamefowl Breeders (NFGB), the biggest federation of game fowl breeders in the Philippines.

The NFGB BOTY plum could be considered as among the most if not the most coveted title by Filipino game fowl breeders, in as much as to win it one has to register the highest combined scores in the Bakbakan 12 stags and Bullang-

bullang 10 bullstags, the countries most prestigious breeders’ derbies.

Yes Barsur did it with a 10-2 in Bakbakan and 9-1 in Bulangbullang. Actually Barsur tied for the NFGB title with Bakbakan champion “NJMAR Gamefarm” of Nerwin Rico Hermoso (12-0; 7-3). The two succeeded “Firebird Gamefarm” of Biboy Enriquez who was NFGB BOTY for 2013-2014.

First try

What made Barsur’s feat the more astounding was the fact that the brothers Camposano and their partner Lemuel Go are by no means classified as big breeders. And Barsur Gamefarm did it on its rookie year with EVGBA, its mother GBA.

Barsur was hardly noticed at the onset of the EVGBA circuit, although it scored 6 wins 1 loss in the Luzon Visayas Mindanao Gamefowl Breeders Union P5M stag-derby, which also served as opening leg among EVGBA members for their association’s BOTY award.

Then the Camposano stags swept the Eastern Visayas elims of the Bakbakan, 3-0 to put the team in contention for the EVGBA BOTY as the Bakbakan elims and the subsequent semis also counted for the EVGBA BOTY race. Barsur got stalled when it only managed a 2-2 score in the Bakbakan semis. However, during the Bakbakan pre-finals in Cebu, Barsur swept its remaining assignment, 5-0.

Midnight grey at Barsigr GF.

The Bakbakan pre-finals did not count in the EVGBA BOTY contest but it was tallied in the NGFB BOTY race.

Then came the Bullangbullang. By sweeping the elims and semis 6-0, Barsur did not only put to rest all doubts in winning the EVGBA BOTY plum, but also position itself seriously in the running for the NFGB BOTY as they now had a total of 16 points out of possible 18.

The Camposanos finally wrapped it up with a 3-1 performance in the Bullangbullang finals in Araneta Coliseum for a total of 9 in the Bullangbullang and 19 overall that tied for the NFGB award.

Materials for the common sabungeros

Another outstanding features in the Varsur story is that the team made it to the top not with expensive bloodlines but with bloodlines for the masang nagmamanok.

An impressed, EVGBA president Luis Alilin who asked Jimmy where he got his materials and were they imported was surprised with

Rey Bajenting (2nd from left) during one of his visits to Lemuel Go (2nd from right) in Leyte.

Jimmy's answer: "Sa Cebu lang po galing, mga bloodline na pangmasa. Sa RB sugbo." Indeed, Jimmy and his brother Rener of Carigara, Leyte were recipient of [Masang Nagmamanok \(MANA\)](#) gamefowl dispersal program.

Some years ago the brothers Camposano availed of the baby materials from MANA which were of RB Sugbo bloodlines. They got a baby pair of Sugbo lemons, two ponkan (sweater) baby pullets and a blueface baby pullet. When these baby breeders matured they again called Rey Bajenting, the breeder and originator of the RB Sugbo bloodlines, for additional materials.

Jimmy also joined MANA's Pinoy Manok Academy Live in February 2013 after which they were able to acquire an additional blue face stag bred at [Scorpion Ox gamefarm](#).

Another turning point in the saga was when the Camposano brothers were told by Bajenting to see Lemuel Go in Tacloban because Lemuel has all of RB Sugbo's bloodlines including then [exclusive blakliz](#). At that time, Lemuel had been fighting RB Sugbo bloodlines with success for already some time. Some of his handlers also came from RB Sugbo that his farm became a virtual partner farm. Thus most queries about RB Sugbo bloodlines from Leyte were redirected to Lemuel.

Their meeting Lemuel resulted in an extra close partnership. "Parang kapatid napo ang turingan naming tatlo ni Lemuel," Jimmy confided to Roosterman. From Lemuel they got the Blakliz, the signature bloodline of RB Sugbo. After which, on their reckoning, they were ready for the EVGBA. So, they joined, they fought, they conquered.

Jimmy Camposano (with cap) during a break in MANA's Pinoy Manok Academy (PMA) Live in Cebu in Feb. 2013. Also on photo is Steve Sarmago (2nd from right) of [Scorpion Ox GF](#) and Dr. Jason Jumaos of [Warhawk Feeds](#).

Roosterman No. 40

Thanks for sharing Roosterman.

Proud to be a masang nagmamanok

By Rey Bajenting

I am happy as a breeder, prouder as a masang nagmamanok.

Jimmy Camposano of Barsur Gamefarm in Carigara and Tacloban Leyte was one of the two that had tied for the NFGB Breeder of the Year for 2014-2015.

In his journey to the top on his very first attempt, Jimmy bred and fought RB Sugbo bloodlines. He scored 25 wins-4 loses in 29 official fights during the season. He won both the EVGBA and NFGB BOTY awards. I'm happy as a breeder because I found out my very own bloodlines, [the Blakliz](#) and Sugbo Lemon (with lots of help of Blue Face from my Migo Jayson Garces) can

compete against and even beat the best, In short they can compete with dignity.

However, I am much happier as a common sabungero, a masang nagmamanok.

As founder of Masang Nagmamanok (MANA), I am proud because Jimmy's success has once again proved that with determination, talent and know how even the small can hit it big. Our efforts were not wasted. See you soon Jimmy and Renner Camposano and Lemuel Go of Team Barsur. This time I will be your student.

Kaya patuloy po nating itaguyod ang kapakanan ng masang sabungero

--- Rey Bajenting

Now they are
doing good.
Tomorrow
they will ...

Hit it big.

And, we're just
contributing our
share to making
things happen.

Don't leave luck to chance.

The Prodigy

of Team Ratliff

Longevity in breeding

Pure what ???

You see it everyday... advertisements online and in the magazines for pure fowl... pure Hatch, pure Kelso's ,pure Lacy's, pure Mugs, pure Sweaters, pure Greys, pure Lemons,,,,trios-pairs-pullets-stag-cocks and hens... PURE, PURE, PURE !!! Is there some big secret to all of this? Can pure fowl really be purchased and if so why are they so valuable ?

The first question that begs to be answered is this... Is there any such thing as pure fowl ??? The answer is simple...No...There is no such thing as pure...it's all so misleading and confusing, it can make your head hurt but plain and simple everything is a cross. Not since the garden of Eden when God put the first game rooster in the garden to wake Adam every morning has there been a pure gamecock. If you dig deep enough into the breeding practices of the great brands of Game-fowl you will find the truth that everything started with crossing one kind of cock over another kind of hen or hens to create what became a branded family of so-called pure fowl... you can look up all the greatest breeds, breeders and everyone started out this way... Then they were all given a name after the owner or breeder or location in which they were bred... Thus a brand of fowl was born... Hatch, Kelso, Sweater, Murphy, Lacy, etc... it's all the same story.

Now don't HEAR what I'm NOT saying. Great families of fowl can be bred and maintained through proper selection and intelligent breeding practices but there is no such thing as pure. "One man's pure is another man's crosses" ...and all bearing the physical, mental and intangible traits of the fowl from which they were bred. Hopefully for the better and not for the worse but improvement and even maintenance only comes from proper breeding techniques and some understanding of genetics. Through this and sharp selection families can be both created and improved... with knowledge of how to properly select, inbreed and line breed you can produce quality fowl that will be able to compete in any heel.

Longevity in Breeding:

A prime example of longevity in breeding families of game fowl is my friend and mentor Mike Ratliff. Most people know Mike for his famous Generals that he has bred for over 55 years however the more amazing story is his lesser-known

MIKE RATLIFF and his favorite 13-year old pure Bell Roundhead brood cock from I. M. Hartt of Vinson, Okla. Mike has had this line of fowl for 31 years.

The author (leftmost) with the entire Team Ratliff on stage demonstrating proper table workouts during the World Gamefowl Expo in Manila in January, 2015.

family of Bell Roundheads. Through strict selection and heavy culling Mike has not only maintained this family of fowl for over 78 years but also improved them to be far better in confirmation and fighting style well above the original pair he started with. All this without adding a single drop of outside blood.

How did he do it ???... I'm glad you asked... It's a process of selection. Choosing the best you have in physical confirmation: large round breast, broad back, short breastbone or keel, medium high station (no high station) deep red eyes, long wings and healthy feathered. This should also be true of your hen. At the same time select the best intangible qualities: Gameness, intelligence, cutting ability, speed and balance, strength, livability or bottom. I know many of you may disagree with my selection and techniques but let me ask you a question. How many of you have maintained a single-family that is still competing and winning for over 40 years without adding any outside blood? 50 years? 60 years? Almost 80 years? Mike Ratliff has.... maybe he knows something we don't ?...I rest my case.

Moving on once you have selected your brood materials knowing how to inbreed and line breed are invaluable to setting up a family and maintaining them indefinitely. Inbreeding (brother sister mating) gives you the ability to lock in the genetic traits you desire. Remember the next step is to compete with your stags you have bred to prove your selection of brood materials...you need to win more than you lose or you may want to rethink your selections. Line breeding (cock side...

father daughter, father granddaughter, father great-granddaughter) and same on the hen side (mother son, mother grandson, mother great-grandson)...this gives you the ability to reproduce your brood cock or hen. With these two techniques you can create a family of fowl, then two sub-families, cock side and hen side, then cross the two families to maintain and improve them indefinitely... but throughout it all the key is selection and good record keeping.

Invest in a Sharp Axe:

Cull, cull and cull some more... these were my dad's favorite words... culling and culling hard is the best way to improve what you have. Eliminating the weak will force your yard to improve. Whether you are a big time breeder or a backyard guy invest in a sharp axe. Start with the egg, only set eggs that are perfectly shaped with no bad bumps or blemishes... make an omelette out of the rest... lol... Cull all weak or sick chicks, those that cry or chirp all the time. Never help them out of the egg. If he can't make it out of the shell he will never make it out of the pit. Cull all physical defects such as badly crooked toes or feet, humps, bumps and weak eyes. Now you're off to a good start.

Once your stags or 11 to 12 months old pre-keep them to gentle them then properly spar 3 times over two weeks... a week apart each time... in other words spar them when you first pick them up to go into the pre keep, then in a week, then a week after that. This is all during the time of the pre-keep. Cull all stags that hit second, are slow or off-balance and those who push off with their feet. I know this part is hard but here is where you make or break your farm... by culling hard. You may not end up with as many as you wanted but what you have left can win.

The Grass is not always Greener in another Breeders Yard:

By this I mean you may have the potential of better game fowl in your own yard than those of some celebrity breeder you're about to give away your hard earned pesos to. Stop daydreaming about the super trio of purebred whatever's and get busy selecting, culling and producing your own. Just like there are no magic shots or pills to make your cocks win there are also no magic family of fowl if not well selected and bred properly year after year.

I'm not saying to NOT purchase quality fowl if you need them. If you need good breeding materials by all means buy them ...however remember they are all just someone else's crosses and select carefully... brand names mean nothing in the pit. You make your own luck in life and sabong by hard work and smart decision making. The decisions you make now will be the destiny you walk out later. Common sense will often level the playing field no matter how much money you have or spend on brood materials. If you don't use common sense, smart breeding practices, hard culling and good selection you will quickly ruin any family of game fowl no matter how great or expensive they were.

Finally, ... my humble opinion is this... find of good family of Game fowl you can enjoy and admire: Game, smart, easy to handle, good conformation with cutting ability and speed... breed the best to the best and forget the rest. Learn about poultry genetics, inbreeding, line breeding and create your own luck... With proper education, dedication and application you can create quality game fowl and maintain them indefinitely. Best wishes and God bless.

(Written by: Douglas Bruce, the Prodigy)

Pure Bell Roundheads of Team Ratliff. Mike Ratliff has kept this family for 78 years, an example of longevity in breeding.

Rooster Biotech

Adapt to environmental conditions

The level of performance of poultry does not only depend on inherited capacity of the flock but also to a great extent on environmental conditions influencing the functioning of the chickens such as temperature, relative humidity, artificial light or length of daylight, housing designs and ventilation, and overall management.

Poultry flocks, including game fowl, are particularly vulnerable to environmental conditions such as climate change because like other birds, they can only tolerate narrow temperature ranges.

Thus, we need to make adaptations.

Game fowl farmers should reconsider new designs in facilities to more effectively cope with new climate and weather extremes, including the installation of new equipment to cope with new climate times.

We also have to adopt measures to mitigate the effects. One of these measures is the biological farming methods, including application of natural soil enhancers and natural disinfectants as these will help improve the habitat; and liver tonics, probiotics, herbal and other organic feeds and supplements as these will enhance

the immune system and maximize fighting capability of the chickens.

Biotechnology for game fowl also endeavors to make the grass, plants and greens in the environment as lush as possible. Should the place fall short on this respect, Rooster Biotech encourages the use of green roofs and green walls in the facilities and surroundings. These things really matter in making the environment where our chickens thrive as cool as possible.

This among the important components of Rooster Biotechnology of RB Sugbo is the application of organic and herbal inputs, products and supplements.

12 simple reasons why natural products are better than chemical

- Create long term immunity and best preventive therapy if used regularly.
- No toxicity or chemical residues .
- Environment friendly. Higher stability.
- Do not show any drug resistance activity.
- Natural growth promoters and metabolic modifiers
- Best remedies for disease at acute stages
- Best supportive therapy in chronic stage, if used with other treatments
- Help regulate metabolism naturally and no adverse effects on hormonal secretion.
- No adverse/side effect and show complimentary effect with substances present in the body.
- Dosage inside the body are self adjustable
- No hyper-sensitivity reaction.
- Easy to utilize by the body cells

What herbs can do for the game fowl

Herbs are adaptogens. Herbs can make the body adjust to necessities in keeping proper balance. They support adrenal functions, they counteract the adverse effects of stress. Adaptogens can calm down and boost the chickens' energy at the same time without over stimulating. They can normalize body imbalances. They enable the body's cells to access more energy; help cells eliminate toxic byproducts of the metabolic process and help the body to utilize oxygen more efficiently.

Herbs are very high in vitamins, minerals, and other nutrients that nourish and build the body. Herbs help in building the foundation for good health. Herbs *regulate the system, and* strengthen, normalize, and tone the glands to function most efficiently.

Herbs stimulate the energy levels within the body, so the body has increased energy. Game fowl needs much energy. They also *cleanse the game fowl's body and promote healing*. Everyday waste products are gathered and eliminated from the body. The body is constantly working to cleanse and heal itself. Herbs help, rather than interfere, with this cleansing, healing, and eliminating process.

Herbs also stimulate the immune system and promote the body's natural good defense task force. In short, herbs help promote the game fowl's general well being the natural way.

.Because, after all, nature grows the best chickens.

Raising Game Fowl The Better Way

Don't leave Luck to chance.

RB Peru

Rafael Bazan

Introduction to Peruvians

Rafael Bazan is a champion breeder of Peruvian Navajeros, having won grand championships in Peru twice. Starting this issue he will be sharing readers his thought and experiences regarding the Peruvian Navajeros.

Here's Rafael Bazan's question's and answers interview with Roosterman E-Mag on some back-grounder on the Peruvian:

Roosterman: Mr. Bazan thank you for granting us this interview. Would you first say something about you and your illustrious career in breeding and fighting Peruvian Navajeros.

Thank you for the opportunity to introduce myself to the game-cock breeders and

lovers in the Philippines. My love for fighting roosters started when I was 13 years old. I had an uncle who raised these birds and I fell in love with them from the moment I laid eyes on them. A few years later I had the chance to meet and get to know some well-known breeders such as Mr. Aurelio Gonzales Vigil, Javier Garcia, Cesar Flores, among others. From these breeders I learned how to create my own bloodline with the characteristics that I desired that even to this day has given me much satisfaction. I am a member of the Peruvian Knife Fighting Rooster Breeders Association (Asociación de criadores de gallos de pelea a navaja del Peru) and Circulo Gallístico of Peru; two of the most prestigious institutions of Peru. I was champion of the Peruvian Knife Fighting Rooster Breeders Association in 2003 and 2004 and have come in 4th place in 2005 and 3rd place in 2013. In the Circulo Gallístico I obtained 3rd place in 1994 and in several other championships I have won different places. All this I have accomplished in my 29 years of breeding.

Are the accounts about the Peruvian Game fowl coming from Spanish, Belgian, Oriental, English Game and other different breeds true? Is there anything you can add about the origin of the Peruvian Gamefowl?

The accounts are true and it is the reason why we are able to notice some differences among Peruvian roosters, such as some which favor Oriental characteristics and others Bankivoides. Since many decades ago up until now many well-known breeders have dedicated to make new crosses with American roosters, roosters from Chile and England, etc. so as to search a way of adding specific characteristics to the bloodline.

According to accounts, the Peruvian game fowl evolved into two types, the big ones which is used for long knife fighting which is the Navajero and the smaller ones, the type used for another kind of fighting. Which of the two types of fighting is the more popular in Peru?

Both are very popular at the national level, in the case of the piqueros (postiza game fowl) they are more widely used in international competitions, due to the fact that this type of rooster fights in many different countries such as Puerto Rico, Spain, Santo Domingo, Chile, Columbia, Ecuador, etc.

Cockfighting is legal in Peru. Right? How frequent are fights held in Peru?

Yes, cockfighting is legal in Peru and it is part of our tradition. The season starts in May and runs through to December with fights every weekend. In summer the roosters start molting and so ends the season.

In which places/cities in Peru that big cockfight events are held? Can you name the top Navajero events in Peru? And, where they are held and how frequent?

We can say that the most important fights are held in the capital Lima, Peru. The most important fights are the Santa Rosa of Lima which is held in August through November and organized by the Peruvian Knife Fighting Rooster Breeders Association; Traditional Championship which is organized by Circulo Gallístico and held May through October; Cotejo de Criadores (derby type system) held from June to August; Confraternidad Cañete held from July to December.

What are the different types of fighting navajeros in Peru and how do you call them, derby? Torneo? Hacks?

The Peruvian navajeros usually are torneos although the Cotejo de Criadores uses an American derby type system. (What is the difference between torneos and American type derbies?)

What is the regular breeding season in Peru? From what month to what month? When is the fighting season? When is molting season?

The regular breeding season is from June until November. The fighting season is from May to December. Molting season starts in December and ends in April.

Can you please add anything about the navajeros?

Yes, the Peruvian navajero for tradition is presented in a pit with its body covered with a small blanket and later are presented or shown to the public one in front of the other with their leashes. During this time the people make their bets. Then they are armed and let loose for the fight.

(To be continued next issue)

Supplement

Liver Tonic: The ultimate foundation supplementation

Liver tonics are among the most effective for foundation supplementation because the liver is a most important organ, it is in fact the powerhouse of the body. So, liver tonics are considered the ultimate foundation supplements. And, the best liver tonics are the herbal and natural ones.

Foundation supplements are designed to ensure that the game fowl's system is ready to absorb and utilize the nutrients necessary for optimum performance. Providing foundation supplements is the first step to proper raising, conditioning and other forms of supplementations. Otherwise, all the special nutrients provided may just go to waste. And, the liver is the clearing house of many of the body's basic metabolic and hormonal functions.

Why is the Liver very important organ to game fowl?

Well, If we want our game cock to perform at his best come fight day we should stimulate and protect his liver. Why? Because, the liver is a central laboratory of a chicken's body. It is essential that this organ is kept in an excellent condition. When the liver is affected due to any reason, efficiency of the liver comes down . This, in turn, affects the overall performance of the bird.

Here are the reasons why the performance of the liver directly affects the fighting performance of the rooster:

Liver is involved in Glycogen and glucose formation in short the liver is involved in energy production.

The liver is the site for erythropoiesis, the formation of red blood cells (RBC). The liver also synthesizes hemoglobin. Of course, we know of the importance of RBC and hemoglobin to the battle fowl.

The liver metabolizes vitamins. – The Vitamin B group or B complex is a very important for game cocks. Products containing B complex are the more common and popular game fowl supplements. Some members of the vitamin B group, especially B1, B2 and Niacin are metabolised in the liver.

Other functions of the liver, all of which contribute to ensure a healthy fighting bird, are the following: iron metabolism, detoxification , protein metabolism, fat metabolism, and hormone production and regulation.

The best liver tonics are those containing extract of herbal ingredients that effectively improve liver functions thus ensuring better feed utilization, energy production and gamecock's overall fighting performance. An example of such liver tonic is Liv 100.
